

## Intro to text mining - Intro to NLP - 1

*One should look for what is and not what he thinks should be. (Albert Einstein)*

# Intro to NLP: Topic introduction

In this part of the course, we will cover the following concepts:

- NLP definition and use cases
- Text analysis terminology

# Chat question

- Here are some reviews of the movie *Doctor Strange in the Multiverse of Madness* that a data analyst wants to explore
- When dealing with **text data** like reviews, what **variables** should the analyst consider?
- How **long** might it take to analyze the data?

 Mackenzie H ★ ★ ★ ★ ★ Verified 2h ago  
Way more violent than anything else in the MCU. Totally disregarded previous stories. Bad writing, cgi, and costume design left my theater unimpressed and laughing at the quality. I walked out and was surprised to see two other groups do the same. Definitely watch once before taking small children. 

 Jerry ★ ★ ★ ★ ★ Verified 2h ago  
The movie is awesome 

 Megan B ★ ★ ★ ★ ★ Verified 2h ago  
This should not be rated PG-13! This was more of a horror movie than a typical Marvel movie. Parents of young children who are used to seeing Marvel movies be warned (there was at least 1 kid crying in the theater). Don't care if i ever see this one again. Big

# Chat question

- Here is a graph built using a text-mining algorithm
- What **categories** define the text?
- What **insights** does this visualization allow you to see?

# Module completion checklist

Objective	Complete
Explain the concept of NLP and how it is used in industry	
Discuss what a corpus is based on use cases	

# What are NLP and text analysis?

- **Natural Language Processing (NLP)** is a host of methods and disciplines, at the crossroad of :
  - data science
  - computational linguistics
  - artificial intelligence
- NLP's main focus is *processing all forms of human language (spoken or written) and getting insightful information out of it*
- **Text analysis is a part of NLP** and we can use it for written text

# What is NLP used for?

- NLP is used for:
  - Generating human speech
  - Automating tasks like machine translation
  - Producing predictive models or detecting patterns in human language

Check out this [article](#) on an interesting application of NLP

# Why text analysis?

- Most of the information and knowledge in the world is stored as text

# Text analysis : What it is ?

- Text Analysis (TA) is an application of machine learning designed to derive meaningful information from unstructured textual data
- Text analysis solutions are deployed to efficiently process and analyze vast quantities of online data and documents, converting them into practical insights
- Text analysis can be employed to identify particular elements such as keywords, names, or corporate details within a massive volume of emails, or to classify feedback from surveys according to sentiment and subject matter

# Text analysis: flow and basic methods

- Text analysis tools range from the simplest to the most advanced
- Here's an example of a flow of text analysis pipeline:

# Text analysis: more advanced methods

- Once you have scraped, cleaned, organized, visualized, and summarized data, more complex methods can be used

Classify  
documents

Extract entities

Analyze  
sentiment

# Text analysis: use cases

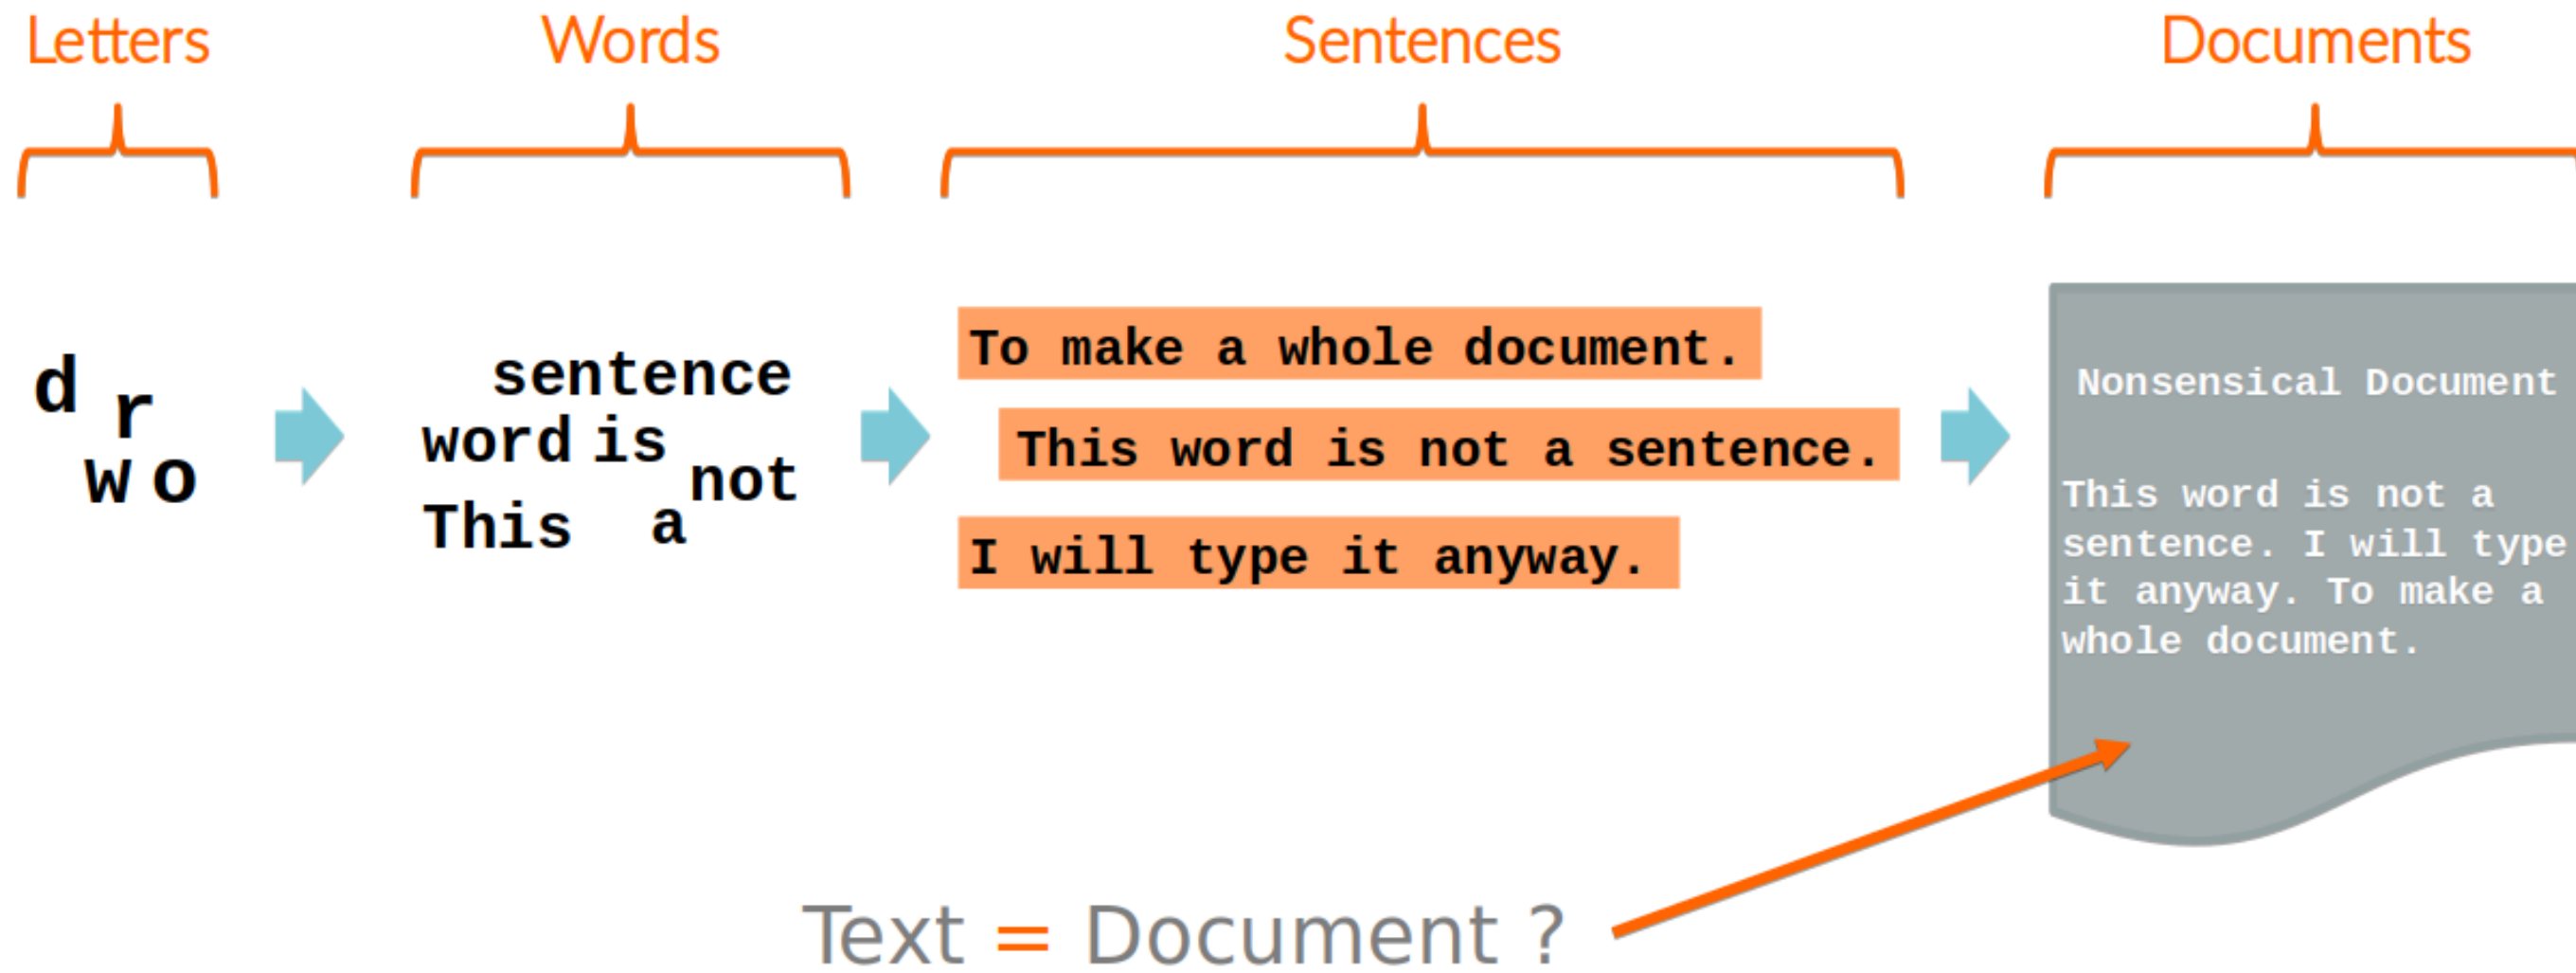

Field	Use case
Natural language processing	Discover patterns in speech; understand how human language works
Business	Help increase profits through analyzing product reviews; summarize and group reports, catalog documents
Psychology & Psychiatry	Analyze sentiments to detect and prevent dangerous social behavior
Network analysis	Augment network analysis to better understand how people interact within a group or react to a certain event

# Module completion checklist

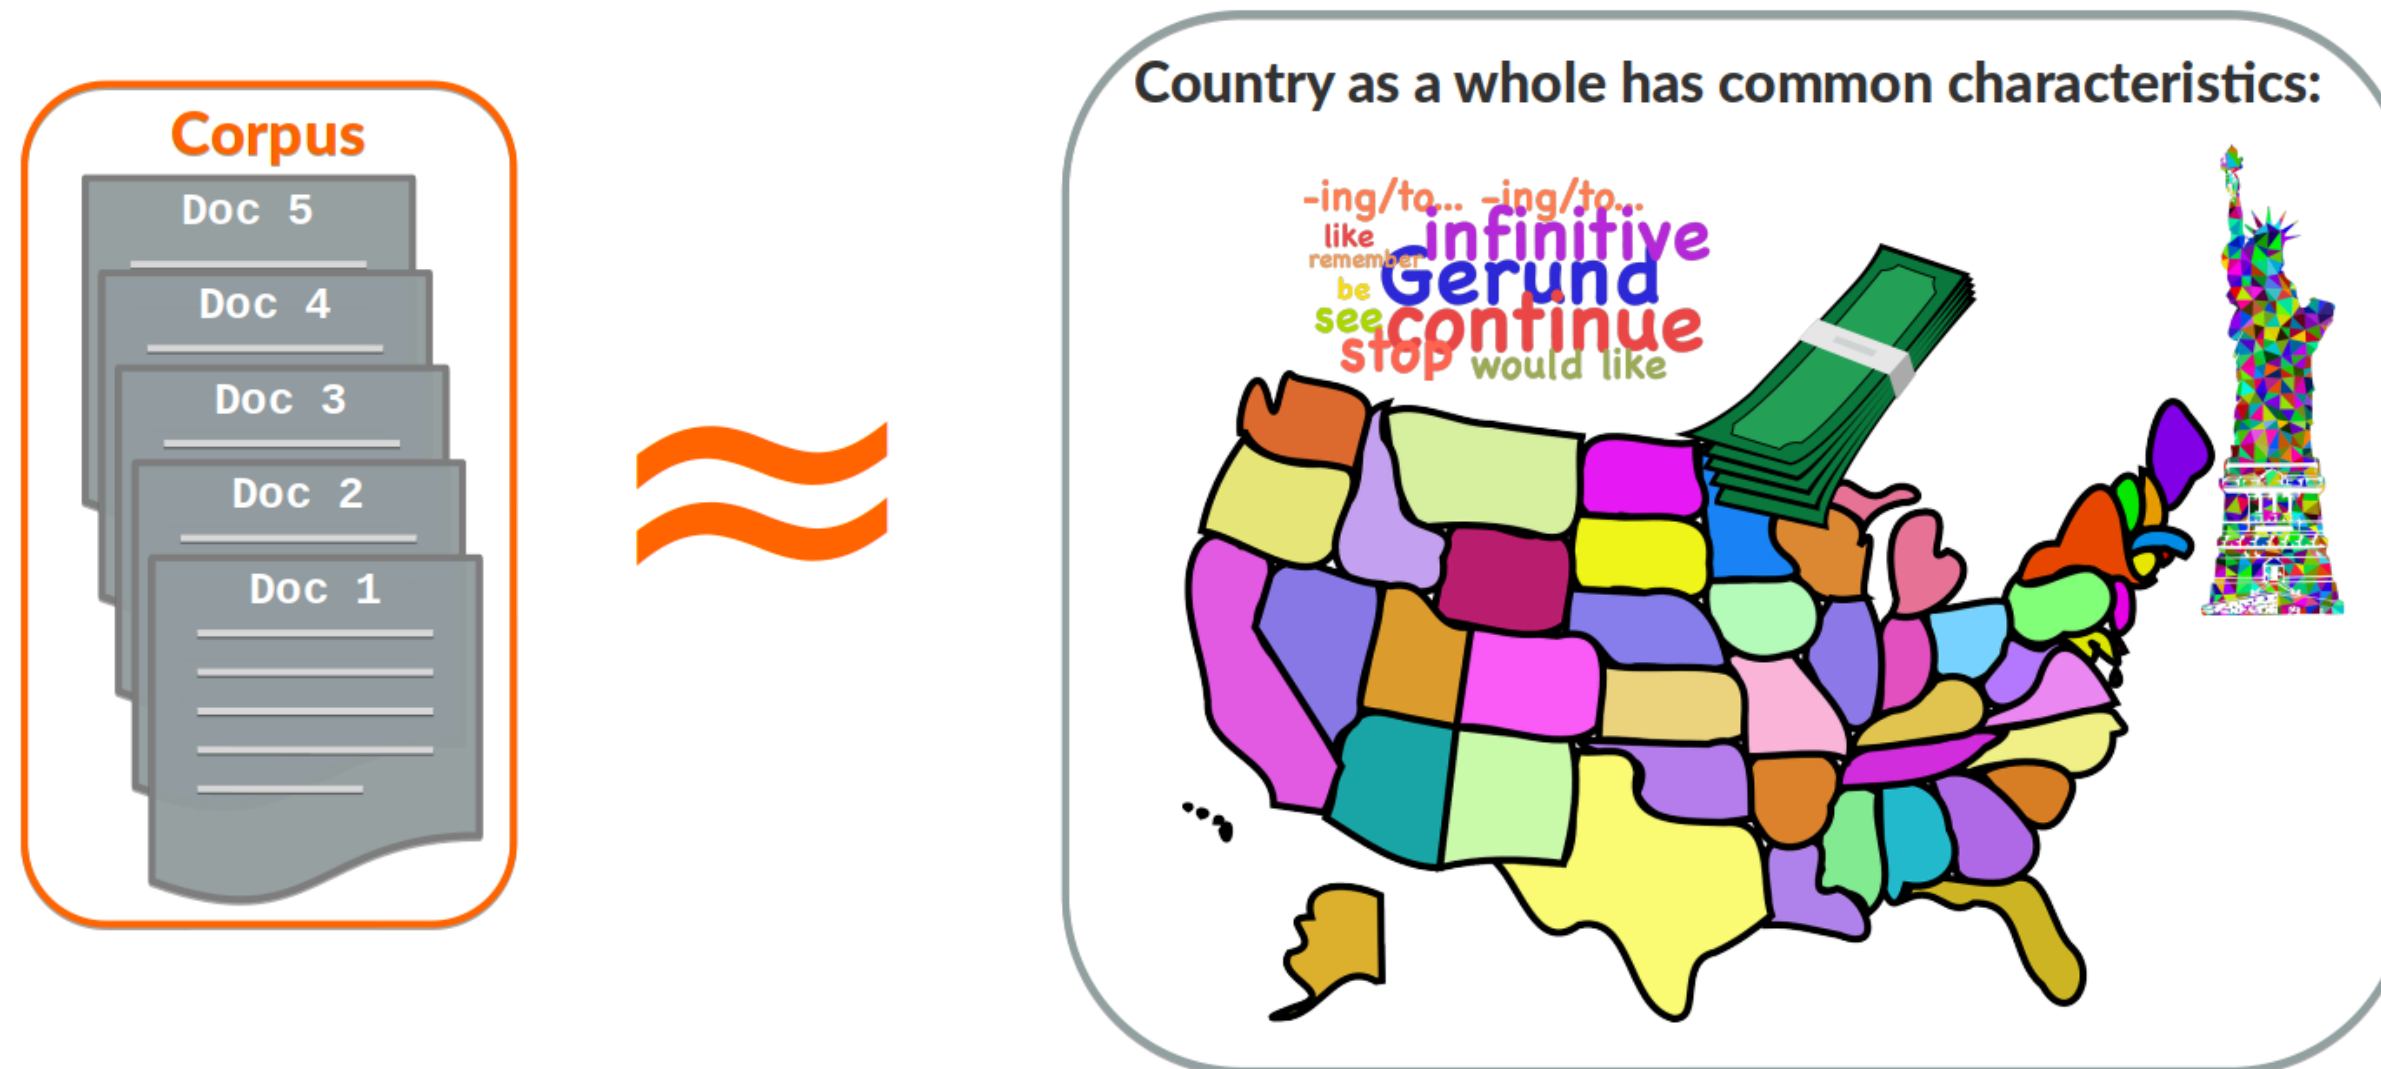

Objective	Complete
Explain the concept of NLP and how it is used in industry	✓
Discuss what a corpus is based on use cases	

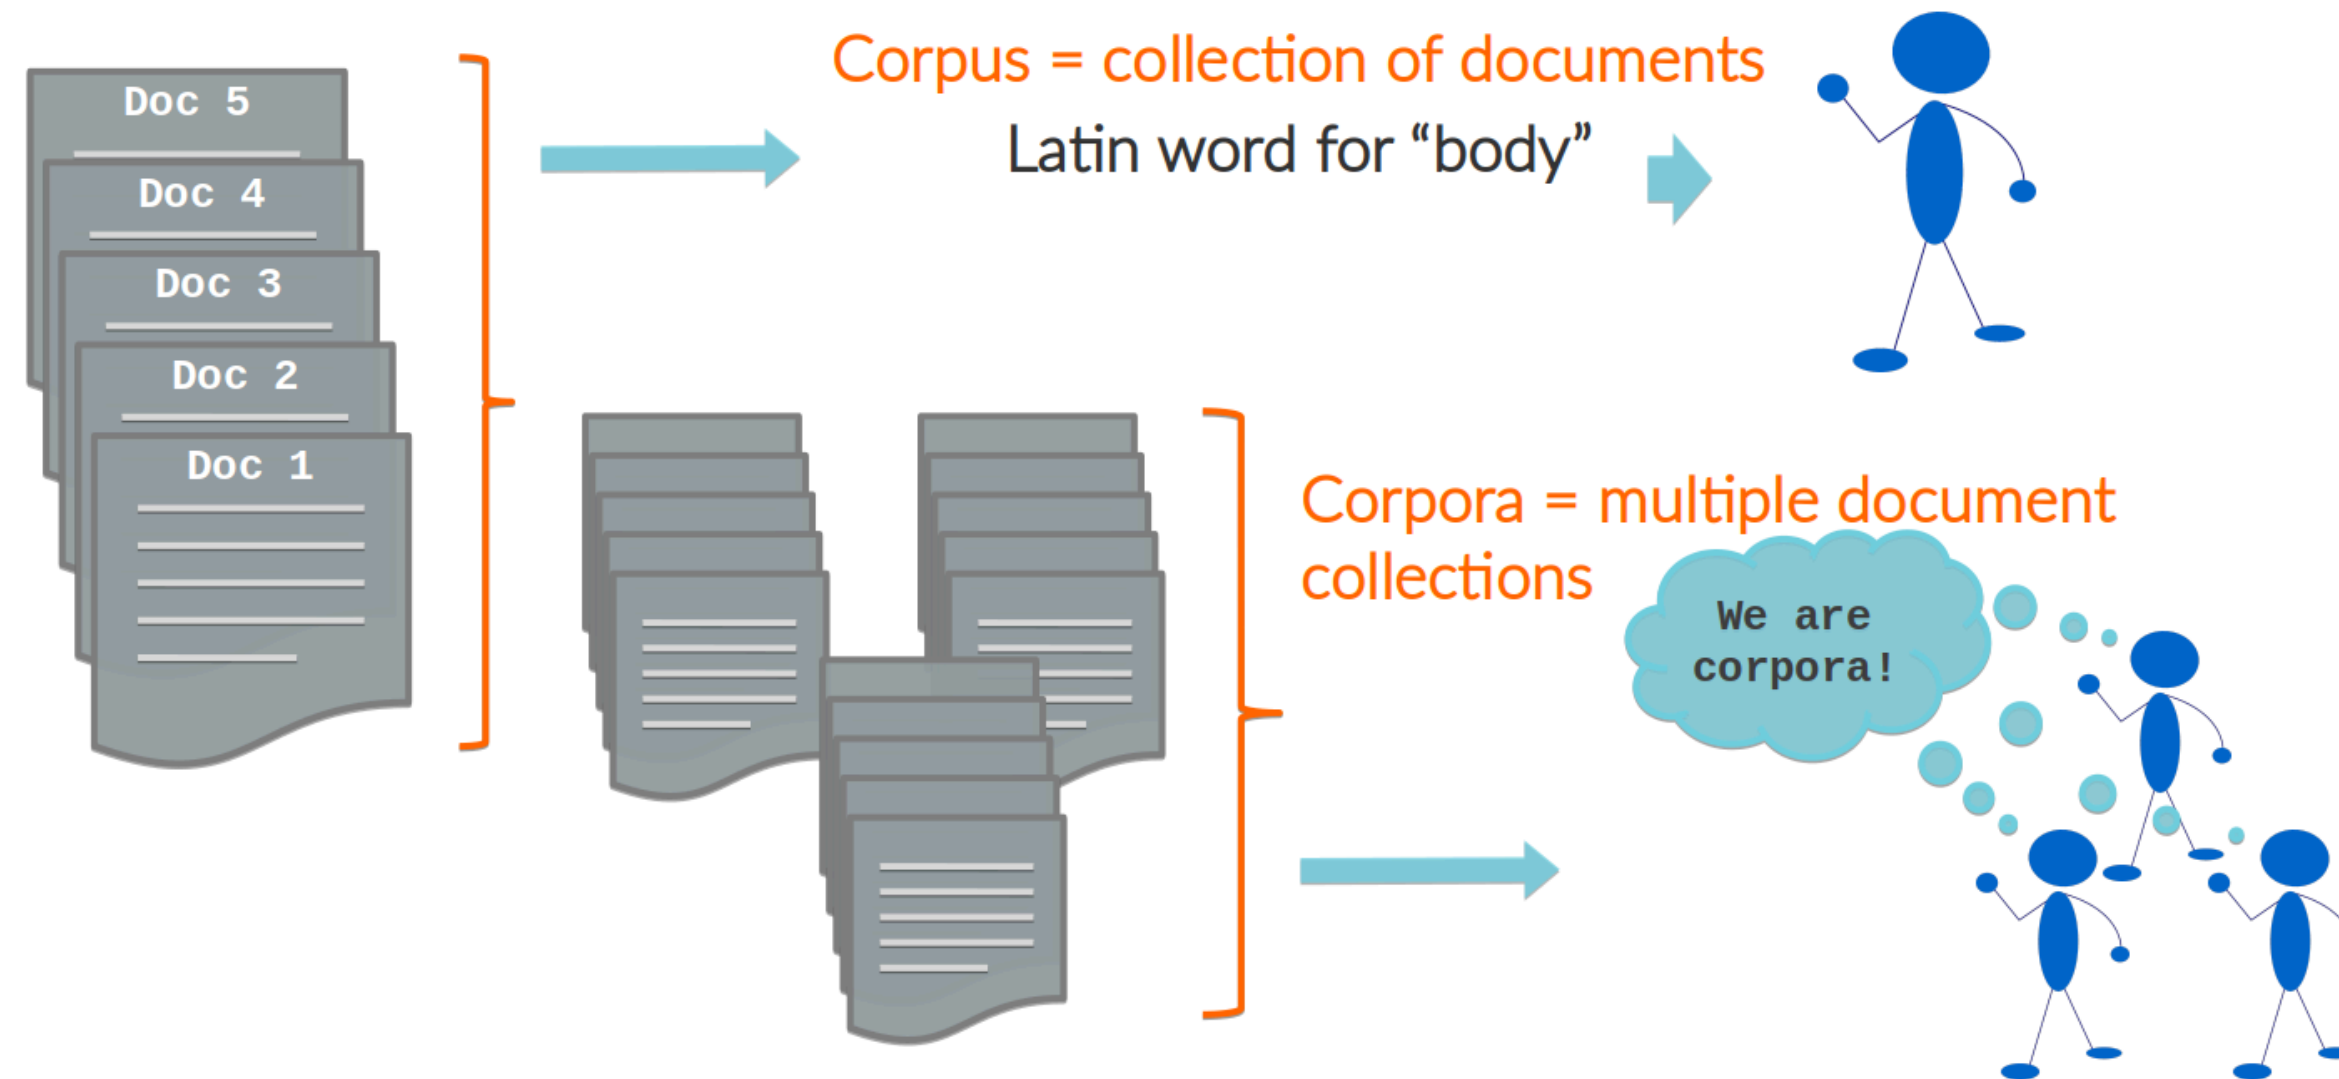

# Units of text data

# Units of text data: corpus

# Units of text data: corpora

# Knowledge check

# Module completion checklist

Objective	Complete
Explain the concept of NLP and how it is used in industry	✓
Discuss what a corpus is based on use cases	✓

# Intro to NLP: Topic summary

In this part of the course, we have covered:

- NLP definition and use cases
- Text analysis terminology

# Congratulations on completing this module!
